Education

Indian Institute of Information Technology, Nagpur August 2024 – June 2028

B.Tech in Computer Science and Engineering, CGPA: 8.56 / 10.0 *Nagpur, India*

- Relevant coursework: Data Structures and Algorithms, Object Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Discrete Mathematics.
- Class XII CBSE, Academic Global School, Gorakhpur: 92.4% (2024). Class X CBSE, Divine Public School, Gorakhpur: 93.2% (2022).

Experience

Xtelify, a Bharti Airtel Foundation Venture May 2026 – July 2026

Backend Development Intern *India*

- Delivered backend features for internal platform modules alongside a 4-member engineering team, designing REST API endpoints and the PostgreSQL relational data models behind them.
- Refactored 500+ lines of SQL across backend reporting modules, rewriting complex joins and query paths to cut data retrieval time for critical reports by 10%.
- Diagnosed and fixed 20+ backend bugs reported by QA Team, tracing root causes through logs and query plans.

Technical Skills

Languages: Python, C++, C, JavaScript, TypeScript, SQL

Backend & APIs: Django, DRF, Node.js, Express.js, REST API design, Celery, webhooks, JWT and OAuth authentication

Databases: PostgreSQL, Redis, MongoDB and DynamoDB

AI & Machine Learning: Retrieval Augmented Generation, Vector search and Embeddings.

Frontend: React, Vite, HTML5, CSS3, responsive design

Tools & DevOps: Git, GitHub, Docker, Docker Compose, AWS, Postman, Linux, Bash, Vercel, Render

Core CS: data structures and algorithms, object-oriented programming, database management systems, operating systems, computer networks

Achievements

Flipkart GRiD 8.0, Semi-finalist, Software Development Track (2026): Placed in the top 2,000 of 170,000+ national registrants, top 1.2%, by clearing screening and coding assessment rounds.

GirlScript Summer of Code 2026, Open-Source Contributor: Built sustained pull request contributions across multiple repositories, ranking in the top 1,305 of 43,000+ participants, roughly the top 3 percentile. Placed in the top **2,000** of **170,000**+ national registrants, top **1.2**%, by clearing screening and coding assessment rounds.

Competitive programming: 3-star on CodeChef (max rating 1727), Pupil on Codeforces (max rating 1260), and 600+ data structures and algorithms problems solved across platforms, including 400+ on LeetCode.

Projects

CommitIQ, AI Code Regression and Performance Intelligence Platform 2026

Python, Django REST Framework, PostgreSQL, Celery, Redis, Docker, React, Supabase | GitHub

- Architected an event-driven commit analysis pipeline on the GitHub REST API with HMAC-SHA256 webhook verification, persisting commit history across 6 PostgreSQL models and exposing 19+ REST endpoints.
- Queued asynchronous analysis jobs through Celery and Redis on a 4-service Docker Compose stack, tracking each job across a 4-state lifecycle (pending, running, done, failed) with client-side polling and retry.
- Shipped a React 19 and Vite single-page application with 8 routed views, Supabase JWT and GitHub OAuth (PKCE) authentication, and risk-scored commit dashboards, deployed on Vercel and Render.
- Built a retrieval augmented generation pipeline over a pgvector store in Supabase.

EvoGene, AI Health Analytics Platform 2026

Python, Django REST Framework, Redis, React, TypeScript | GitHub

- Architected and delivered 10+ REST APIs in Django REST Framework serving real-time DNA analysis and AI brain-scan results to a React frontend at HackCBS 8.0, a hackathon with 5,400+ participants.
- Exposed DNA analysis and brain-scan models through Django REST Framework endpoints, handling file upload, input validation, and JSON responses for the React frontend.
- Cut average inference latency by 60% by designing a Redis caching layer for ML predictions, keeping the platform responsive under 50+ concurrent requests during the live demo.

XOne, Real-Time AI Terminal Watchdog 2026

Python, JSON, LLM integration, Docker, Linux | GitHub

- Developed a real-time log monitoring daemon in Python that classifies runtime errors across 5+ categories from terminal output and returns AI-generated fix suggestions in under 10 seconds.
- Engineered a backend pipeline serializing each suggested fix as structured JSON and routing it through a safety-filtering layer (ArmorIQ) that screened out roughly 80% of unsafe code before execution.
